

Dear Supplier,

Please find below updated safety rules within Ecolab for bulk deliveries, can you check / communicate to your forwarders the points below. **Please note that this is valid as from 19/03/2018.**

1. Trucks have to be equipped in such a way whether or not the driver or Ecolab staff needs to go on top of the truck. We prefer ground controlled trucks. Be aware sampling of the truck prior to unloading remains mandatory for us due to Ecolab safety policy. If no ground controlled truck can be found, please note that the driver should be equipped with safety gear as described in point 2.
2. If the truck can't open the air valves and product sampling automatically, drivers need to address themselves at the reception in safety equipment before getting an entrance code to our unloading zone. **If safety equipment (life lines) are used, please note that driver should wear a helmet. Driver will also receive a Man Down phone for emergencies when using our life lines. We request the ADR license from the driver as warranty for the usage of this phone.**

3. Drivers should be able to understand one of the 4 languages, Dutch, English, German or French. As we are a Seveso plant, understanding safety instructions at all times are an absolute must.
4. Required PPE (Personal Protection Equipment for the driver): Face shield, gloves, protective clothing, goggles. This needs to be shown at the reception desk, otherwise the driver can't access the unloading zone.

5. Ecolab will not unload tankers if rules above are not met.

Thanks you for informing your forwarder and send us back your signed / stamped letter.
