

Stay better protected with cloud security.

For better peace of mind, bring your traceability records and data together with a cloud-based solution designed to heighten security and protect data:

- Comply with healthcare industry-recognized security and privacy requirements
- Receive security audits, penetration tests, and code review
- Leverage the robust security features by integrating EP-Digital solution within leading cloud platform
- All with the cybersecurity expertise and certified reassurance of a trusted partner

EP-DIGITAL

ECOLAB
PROTECTING WHAT'S VITAL™

Greater visibility. Greater staff empowerment.

EP-Digital unites endoscope reprocessing teams with greater simplicity, security and visibility.

Bringing workflows and data together in one centralized digital system, every aspect can be easily documented, recorded and monitored, resulting in better confidence and collaboration for all.

Ecolab Endoscope Reprocessing. Changing endoscope reprocessing for the better.

Your partner for the better.

Ecolab is your trusted hygiene partner. We help to make the world cleaner, safer and healthier, while protecting people and resources that are vital to life. Building on more than a century of innovation, we deliver comprehensive infection prevention solutions to optimize efficiency, lower total costs and improve patient satisfaction and staff engagement.

Get better connected with integrated workflows.

Offering automated efficiency and clarity, **EP-Digital's** all-in-one platform brings together team processes for more effective reprocessing monitoring and documentation:

- Simple collaborative tools streamline daily workflows, reducing guesswork
- Centralized information to relieve administrative operations, saving valuable time
- Strong data analytics capability to drive continuous improvement within the endoscopy department

Better for patient-to- patient tracking.

EP-Digital provides the data you need at your fingertips to track and trace with ease, reduce workloads and manage reprocessing outcomes effectively:

- Effortless implementation of traceability for every reprocessing activity
- Enable data integration with your existing local IT ecosystem to support "zero paper" projects
- Inform decisions with real-time feedback and deliver pro-active risk management
